## **BID Polyclonal Antibody**

| Catalog No         | YP-Ab-00327   |
|--------------------|---|
| Isotype            | IgG   |
| Reactivity         | Human;Rat;Mouse;  |
| Applications       | WB;IHC;IF;ELISA   |
| Gene Name          | BID   |
| Protein Name       | BH3-interacting domain death agonist  |
| Immunogen          | The antiserum was produced against synthesized peptide derived from human BID. AA range:44-93   |
| Specificity        | BID Polyclonal Antibody detects endogenous levels of BID protein.   |
| Formulation        | Liquid in PBS containing 50% glycerol, 0.5% BSA and 0.02% sodium azide.   |
| Source             | Polyclonal, Rabbit,IgG  |
| Purification       | The antibody was affinity-purified from rabbit antiserum by affinity-chromatography using epitope-specific immunogen.   |
| Dilution           | WB: 1/500 - 1/2000. IHC: 1/100 - 1/300. ELISA: 1/10000 IF 1:50-200  |
| Concentration      | 1 mg/ml   |
| Purity             | ≥90%  |
| Storage Stability  | -20°C/1 year  |
| Synonyms           | BID; BH3-interacting domain death agonist; p22 BID; BID   |
| Observed Band      | 25kD  |
| Cell Pathway       | Cytoplasm . Mitochondrion membrane . Mitochondrion outer membrane . When uncleaved, it is predominantly cytoplasmic; [BH3-interacting domain death agonist p15]: Mitochondrion membrane . Translocates to mitochondria as an integral membrane protein; [BH3-interacting domain death agonist p13]: Mitochondrion membrane . Associated with the mitochondrial membrane; [Isoform 1]: Cytoplasm .; [Isoform 3]: Cytoplasm .; [Isoform 2]: Mitochondrion membrane . A significant proportion of isoform 2 localizes to mitochondria, it may be cleaved constitutively  |
| Tissue Specificity | [Isoform 2]: Expressed in spleen, pancreas and placenta (at protein level).; [Isoform 3]: Expressed in lung, pancreas and spleen (at protein level).; [Isoform 4]: Expressed in lung and pancreas (at protein level).   |
| Function           | domain:Intact BH3 motif is required by BIK, BID, BAK, BAD and BAX for their pro-apoptotic activity and for their interaction with anti-apoptotic members of the Bcl-2 family.,function:The major proteolytic product p15 BID allows the release of cytochrome c (By similarity). Isoform 1, isoform 2 and isoform 4 induce ICE-like proteases and apoptosis. Isoform 3 does not induce apoptosis. Counters the protective effect of Bcl-2.,PTM:Phosphorylated upon DNA damage, probably by ATM or ATR.,PTM:TNF-alpha induces a caspase-mediated cleavage of p22 BID into a major p15 and minor p13 and p11 products.,subcellular location:A |

|---------------------------|---|
| Background                | This gene encodes a death agonist that heterodimerizes with either agonist BAX or antagonist BCL2. The encoded protein is a member of the BCL-2 family of cell death regulators. It is a mediator of mitochondrial damage induced by caspase-8 (CASP8); CASP8 cleaves this encoded protein, and the COOH-terminal part translocates to mitochondria where it triggers cytochrome c release. Multiple alternatively spliced transcript variants have been found, but the full-length nature of some variants has not been defined. [provided by RefSeq, Jul 2008], |
| matters needing attention | Avoid repeated freezing and thawing!  |
| Usage suggestions         | This product can be used in immunological reaction related experiments. For more information, please consult technical personnel.   |
