## NFkB-p65 (phospho Ser468) Polyclonal Antibody

| Catalog No         | YP-Ab-01269  |
|--------------------|--|
| Isotype            | IgG  |
| Reactivity         | Human;Mouse;Rat;Pig  |
| Applications       | WB;IHC;IF;IP;ELISA   |
| Gene Name          | RELA   |
| Protein Name       | Transcription factor p65   |
| Immunogen          | The antiserum was produced against synthesized peptide derived from human NF-kappaB p65 around the phosphorylation site of Ser468. AA range:435-484  |
| Specificity        | Phospho-NFκB-p65 (S468) Polyclonal Antibody detects endogenous levels of NFκ<br>B-p65 protein only when phosphorylated at S468.  |
| Formulation        | Liquid in PBS containing 50% glycerol, 0.5% BSA and 0.02% sodium azide.  |
| Source             | Polyclonal, Rabbit,IgG   |
| Purification       | The antibody was affinity-purified from rabbit antiserum by affinity-chromatography using epitope-specific immunogen.  |
| Dilution           | WB: 1/500 - 1/2000. IHC: 1/100 - 1/300. Immunoprecipitation: 2-5 ug/mg lysate.<br>ELISA: 1/20000 IF 1:50-200   |
| Concentration      | 1 mg/ml  |
| Purity             | ≥90%   |
| Storage Stability  | -20°C/1 year   |
| Synonyms           | RELA; NFKB3; Transcription factor p65; Nuclear factor NF-kappa-B p65 subunit; Nuclear factor of kappa light polypeptide gene enhancer in B-cells 3   |
| Observed Band      | 60kD   |
| Cell Pathway       | Nucleus . Cytoplasm . Nuclear, but also found in the cytoplasm in an inactive form complexed to an inhibitor (I-kappa-B) (PubMed:1493333). Colocalized with DDX1 in the nucleus upon TNF-alpha induction (PubMed:19058135). Colocalizes with GFI1 in the nucleus after LPS stimulation (PubMed:20547752). Translocation to the nucleus is impaired in L.monocytogenes infection (PubMed:20855622).   |
| Tissue Specificity | Bone,Colon,Pancreas,Placenta,  |
| Function           | function:NF-kappa-B is a pleiotropic transcription factor which is present in almost<br>all cell types and is involved in many biological processed such as inflammation,<br>immunity, differentiation, cell growth, tumorigenesis and apoptosis. NF-kappa-B is<br>a homo- or heterodimeric complex formed by the Rel-like domain-containing<br>proteins RELA/p65, RELB, NFKB1/p105, NFKB1/p50, REL and NFKB2/p52 and<br>the heterodimeric p65-p50 complex appears to be most abundant one. The<br>dimers bind at kappa-B sites in the DNA of their target genes and the individual<br>dimers have distinct preferences for different kappa-B sites that they can bind with<br>distinguishable affinity and specificity. Different dimer combinations act as<br>transcriptional activators or repressors, respectively. NF-kappa-B is controlled by<br>various mechanisms of post-translational modification and subcellular |

## compartmentalization as well as by in

| Background                | NF-kappa-B is a ubiquitous transcription factor involved in several biological processes. It is held in the cytoplasm in an inactive state by specific inhibitors. Upon degradation of the inhibitor, NF-kappa-B moves to the nucleus and activates transcription of specific genes. NF-kappa-B is composed of NFKB1 or NFKB2 bound to either REL, RELA, or RELB. The most abundant form of NF-kappa-B is NFKB1 complexed with the product of this gene, RELA. Four transcript variants encoding different isoforms have been found for this gene. [provided by RefSeq, Sep 2011], |
|---------------------------|--|
| matters needing attention | Avoid repeated freezing and thawing!   |
| Usage suggestions         | This product can be used in immunological reaction related experiments. For more information, please consult technical personnel.  |
