Dynein IC1 Polyclonal Antibody

Catalog No	YP-Ab-03127	
lsotype	lgG	
Reactivity	Human;Mouse;Rat	
Applications	WB;ELISA	
Gene Name	DNAI1	
Protein Name	Dynein intermediate chain 1 axonemal	
Immunogen	The antiserum was produced against synthesized peptide derived from human DNAI1. AA range:211-260	
Specificity	Dynein IC1 Polyclonal Antibody detects endogenous levels of Dynein IC1 protein.	
Formulation	Liquid in PBS containing 50% glycerol, 0.5% BSA and 0.02% sodium azide.	
Source	Polyclonal, Rabbit,IgG	
Purification	The antibody was affinity-purified from rabbit antiserum by affinity-chromatography using epitope-specific immunogen.	
Dilution	Western Blot: 1/500 - 1/2000. ELISA: 1/20000. Not yet tested in other applications.	
Concentration	1 mg/ml	
Purity	≥90%	
Storage Stability	-20°C/1 year	
Synonyms	DNAI1; Dynein intermediate chain 1; axonemal; Axonemal dynein intermediate chain 1	
Observed Band	79kD	
Cell Pathway	Dynein axonemal particle . Cytoplasm, cytoskeleton, cilium axoneme .	
Tissue Specificity	Expressed in respiratory ciliated cells (at protein level).	
Function	disease:Defects in DNAI1 are the cause of Kartagener syndrome (KTGS) [MIM:244400]. KTGS is an autosomal recessive disorder characterized by the association of primary ciliary dyskinesia with situs inversus. Clinical features include recurrent respiratory infections, bronchiectasis, infertility, and lateral transposition of the viscera of the thorax and abdomen. The situs inversus is most often total, although it can be partial in some cases (isolated dextrocardia or isolated transposition of abdominal viscera).,disease:Defects in DNAI1 are the cause of primary ciliary dyskinesia type 1 (CILD1) [MIM:244400]. CILD1 is an autosomal recessive disorder characterized by axonemal abnormalities of motile cilia. Respiratory infections leading to chronic inflammation and bronchiectasis are recurrent, due to defects in the respiratory cilia; reduced fertility is often observed in male patients due

BackgroundThis gene encodes a member of the dynein intermediate chain family. The
encoded protein is part of the dynein complex in respiratory cilia. The inner- and
outer-arm dyneins, which bridge between the doublet microtubules in axonemes,
are the force-generating proteins responsible for the sliding movement in
axonemes. The intermediate and light chains, thought to form the base of the
dynein arm, help mediate attachment and may also participate in regulating
dynein activity. Mutations in this gene result in abnormal ciliary ultrastructure and
function associated with primary ciliary dyskinesia and Kartagener syndrome.
Alternative splicing results in multiple transcript variants. [provided by RefSeq, Jul
2013],matters needing
attentionAvoid repeated freezing and thawing!Usage suggestionsThis product can be used in immunological reaction related experiments. For
more information, please consult technical personnel.
