## Factor XIII B Polyclonal Antibody

| Catalog No         | YP-Ab-04348   |
|--------------------|---|
| lsotype            | lgG   |
| Reactivity         | Human;Rat;Mouse;  |
| Applications       | WB;IHC;IF;ELISA   |
| Gene Name          | F13B  |
| Protein Name       | Coagulation factor XIII B chain   |
| Immunogen          | The antiserum was produced against synthesized peptide derived from the Internal region of human F13B. AA range:500-550   |
| Specificity        | Factor XIII B Polyclonal Antibody detects endogenous levels of Factor XIII B<br>protein.  |
| Formulation        | Liquid in PBS containing 50% glycerol, 0.5% BSA and 0.02% sodium azide.   |
| Source             | Polyclonal, Rabbit,IgG  |
| Purification       | The antibody was affinity-purified from rabbit antiserum by affinity-chromatography using epitope-specific immunogen.   |
| Dilution           | WB: 1/500 - 1/2000. IHC-p: 1:100-1:300. ELISA: 1/10000 IF 1:50-200  |
| Concentration      | 1 mg/ml   |
| Purity             | ≥90%  |
| Storage Stability  | -20°C/1 year  |
| Synonyms           | F13B; Coagulation factor XIII B chain; Fibrin-stabilizing factor B subunit;<br>Protein-glutamine gamma-glutamyltransferase B chain; Transglutaminase B<br>chain   |
| Observed Band      | 65kD  |
| Cell Pathway       | Secreted .  |
| Tissue Specificity | Heart,Liver,Plasma,   |
| Function           | disease:Defects in F13B can result in a lifelong bleeding tendency, defective wound healing, and habitual abortion.,function:The B chain of factor XIII is not catalytically active, but is thought to stabilize the A subunits and regulate the rate of transglutaminase formation by thrombin.,online information:Factor XIII entry,online information:The Singapore human mutation and polymorphism database,similarity:Contains 10 Sushi (CCP/SCR) domains.,subunit:Tetramer of two A chains and two B chains., |
| Background         | This gene encodes coagulation factor XIII B subunit. Coagulation factor XIII is the last zymogen to become activated in the blood coagulation cascade. Plasma factor XIII is a heterotetramer composed of 2 A subunits and 2 B subunits. The A subunits have catalytic function, and the B subunits do not have enzymatic activity and may serve as a plasma carrier molecules. Platelet factor XIII is comprised   |

|                           | only of 2 A subunits, which are identical to those of plasma origin. Upon activation<br>by the cleavage of the activation peptide by thrombin and in the presence of<br>calcium ion, the plasma factor XIII dissociates its B subunits and yields the same<br>active enzyme, factor XIIIa, as platelet factor XIII. This enzyme acts as a<br>transglutaminase to catalyze the formation of gamma-glutamyl-epsilon-lysine<br>crosslinking between fibrin molecules, thus stabilizing the fibrin clot. Factor XIII<br>deficiency is classi |
|---------------------------|--|
| matters needing attention | Avoid repeated freezing and thawing!   |
| Usage suggestions         | This product can be used in immunological reaction related experiments. For more information, please consult technical personnel.  |

## **Products Images**

Western blot analysis of varias lysis using F13B antibody. Antibody was diluted at 1:2000. Secondary antibody(catalog#:RS0002) was diluted at 1:20000

Immunohistochemical analysis of paraffin-embedded human-liver, antibody was diluted at 1:200
