## E2F-1 (Acetyl-K125) Polyclonal Antibody

Catalog No	YP-Ab-04412
Isotype	IgG
Reactivity	Human:K125;Mouse:K120;Rat:K123
Applications	WB;ELISA
Gene Name	E2F1 RBBP3
Protein Name	E2F-1
Immunogen	Synthesized Acetyl peptide derived from human E2F-1. at AA range: K125
Specificity	This antibody detects endogenous levels of E2F-1 at Human:K125;Mouse:K120;Rat:K123, It doesn't reacte with total protein.
Formulation	Liquid in PBS containing 50% glycerol, 0.5% BSA and 0.02% sodium azide.
Source	Polyclonal, Rabbit,IgG
Purification	The antibody was affinity-purified from rabbit antiserum by affinity-chromatography using epitope-specific immunogen.
Dilution	Western Blot: 1/500 - 1/2000. ELISA: 1/20000. Not yet tested in other applications.
Concentration	1 mg/ml
Purity	≥90%
Storage Stability	-20°C/1 year
Synonyms	Transcription factor E2F1 (E2F-1) (PBR3) (Retinoblastoma-associated protein 1) (RBAP-1) (Retinoblastoma-binding protein 3) (RBBP-3) (pRB-binding protein E2F-1)
Observed Band	60kD
Cell Pathway	Nucleus .
Tissue Specificity	Brain,Epithelium,Pancreas,Skin,
Function	function:Transcription activator that binds DNA cooperatively with dp proteins through the E2 recognition site, 5'-TTTC[CG]CGC-3' found in the promoter region of a number of genes whose products are involved in cell cycle regulation or in DNA replication. The DRTF1/E2F complex functions in the control of cell-cycle progression from G1 to S phase. E2F-1 binds preferentially RB1 protein, in a cell-cycle dependent manner. It can mediate both cell proliferation and p53-dependent apoptosis.,PTM:Phosphorylated by CDK2 and cyclin A-CDK2 in the S-phase.,similarity:Belongs to the E2F/DP family.,subunit:Component of the DRTF1/E2F transcription factor complex. Forms heterodimers with DP family members. The E2F-1 complex binds specifically hypophosphorylated retinoblastoma protein RB1. During the cell cycle, RB1 becomes phosphorylated in mid-to-late G1 phase, detaches from the DRTF1/E2F complex, ren

BackgroundThe protein encoded by this gene is a member of the E2F family of transcription<br/>factors. The E2F family plays a crucial role in the control of cell cycle and action of<br/>tumor suppressor proteins and is also a target of the transforming proteins of<br/>small DNA tumor viruses. The E2F proteins contain several evolutionally<br/>conserved domains found in most members of the family. These domains include<br/>a DNA binding domain, a dimerization domain which determines interaction with<br/>the differentiation regulated transcription factor proteins (DP), a transactivation<br/>domain enriched in acidic amino acids, and a tumor suppressor protein<br/>association domain which is embedded within the transactivation domain. This<br/>protein and another 2 members, E2F2 and E2F3, have an additional cyclin<br/>binding domain. This protein binds preferentially to retinoblastoma protein pRB in<br/>a cell-cycle dependent manner. It can mediaMatters needing<br/>attentionAvoid repeated freezing and thawing!Usage suggestionsThis product can be used in immunological reaction related experiments. For<br/>more information, please consult technical personnel.
