CAMLG Polyclonal Antibody

Catalog No YP-Ab-05393 Isotype IgG Reactivity Human;Rat;Mouse; Applications WB;ELISA Gene Name CAMLG CAML Protein Name Calcium signal-modulating cyclophilin ligand (CAML) Immunogen Synthesized peptide derived from part region of human protein Specificity CAMLG Polyclonal Antibody detects endogenous levels of protein. Formulation Liquid in PBS containing 50% glycerol, and 0.02% sodium azide. Source Polyclonal, Rabbit, IgG Purification The antibody was affinity-purified from rabbit antiserum by affinity-chromatography using epitope-specific immunogen. Dilution WB 1:500-2000 ELISA 1:5000-20000 Concentration 1 mg/ml Purity ≥90% Storage Stability -20*C/1 year Synonyms Observed Band 32kD Cell Pathway Endoplasmic reticulum membrane; Multi-pass membrane protein. Tissue Specifficity Ubiquitous. Highest levels in brain, testis and ovary. Function function:Likely involved in the mobilization of calcium as a result of the TCR/CD3 control on TirkS* 136/TACI, tissues specificity Ubiquitous. Highest levels in brain, testis and ovary.		
Reactivity Human;Rat;Mouse; Applications WB;ELISA Gene Name CAMLG CAML Protein Name Calcium signal-modulating cyclophilin ligand (CAML) Immunogen Synthesized peptide derived from part region of human protein Specificity CAMLG Polyclonal Antibody detects endogenous levels of protein. Formulation Liquid in PBS containing 50% glycerol, and 0.02% sodium azide. Source Polyclonal, Rabbit,IgG Purification The antibody was affinity-purified from rabbit antiserum by affinity-chromatography using epitope-specific immunogen. Dilution WB 1:500-2000 ELISA 1:5000-20000 Concentration 1 mg/ml Purity ≥90% Storage Stability -20°C/1 year Synonyms Observed Band 32kD Cell Pathway Endoplasmic reticulum membrane; Multi-pass membrane protein. Tissue Specificity Ubiquitous. Highest levels in brain, testis and ovary. Function function:Likely involved in the mobilization of calcium as a result of the TCR/CD3 complex interaction. Blnds to cyclophilin B, subunit:The N-terminal domain binds to TNFRSF13B/TAC1, tissue specificity:Ubiquitous. Highest levels in brain, testis and ovary. The immunosuppressant drug cyclosporin A blocks a calcium-dependent signal from the T-cell receptor (TCR) that normally leads to T-cell activation. When bound to cyclophilin B, cyclosporin A binds and inactivates the key signaling intermediate calcineum: The protein encoded by this gene functions similarly to cyclosporin A, binding to cyclophilin B and acting downstream of the TCR and upstream of calcium-mis in influx of calcium. This integral membrane protein appears to be a new participant in the calcium signal transduction approved in a pathway, implicating cyclophilin B in calcium signal ingulant irensduction protein appears to be a new participant in the calcium signal transduction and substream of the TCR and upstream of calcium-mis in influx of calcium. This integral membrane	Catalog No	YP-Ab-05393
