

BMP-1 Polyclonal Antibody

Catalog No	YP-Ab-10703
Isotype	IgG
Reactivity	Human;Mouse;Rat
Applications	IHC;IF;ELISA
Gene Name	BMP1 PCOLC
Protein Name	Bone morphogenetic protein 1 (BMP-1) (EC 3.4.24.19) (Mammalian tolloid protein) (mTld) (Procollagen C-proteinase) (PCP)
Immunogen	Synthetic peptide from human protein at AA range: 131-180
Specificity	The antibody detects endogenous BMP-1
Formulation	Liquid in PBS containing 50% glycerol, 0.5% BSA and 0.02% sodium azide.
Source	Polyclonal, Rabbit,IgG
Purification	The antibody was affinity-purified from rabbit antiserum by affinity-chromatography using epitope-specific immunogen.
Dilution	IHC-p 1:50-200, ELISA 1:10000-20000. IF 1:50-200
Concentration	1 mg/ml
Purity	≥90%
Storage Stability	-20°C/1 year
Synonyms	Bone morphogenetic protein 1 (BMP-1;EC 3.4.24.19;Mammalian tolloid protein;mTld;Procollagen C-proteinase;PCP)
Observed Band	
Cell Pathway	Golgi apparatus, trans-Golgi network . Secreted, extracellular space, extracellular matrix . Secreted . Co-localizes with POSTN in the Golgi. .; [Isoform BMP1-3]: Secreted .
Tissue Specificity	Ubiquitous.
Function	catalytic activity: Cleavage of the C-terminal propeptide at Ala -Asp in type I and II procollagens and at Arg -Asp in type III., cofactor: Binds 1 zinc ion per subunit., enzyme regulation: Activity is increased by the procollagen C-endopeptidase enhancer protein., function: Cleaves the C-terminal propeptides of procollagen I, II and III. Induces cartilage and bone formation. May participate in dorsoventral patterning during early development by cleaving chordin (CHRD)., similarity: Belongs to the peptidase M12A family., similarity: Contains 2 EGF-like domains., similarity: Contains 5 CUB domains., tissue specificity: Ubiquitous.,
Background	This gene encodes a protein that is capable of inducing formation of cartilage in vivo. Although other bone morphogenetic proteins are members of the TGF-beta superfamily, this gene encodes a protein that is not closely related to other known growth factors. This gene is expressed as alternatively spliced variants that share

an N-terminal protease domain but differ in their C-terminal region. [provided by RefSeq, Aug 2008],
