Function	function:Regulator of Notch signaling, a signaling pathway involved in cell-cell communications that regulates a broad spectrum of cell-fate determinations. Probably acts both as a positive and negative regulator of Notch, depending on the developmental and cell context (By similarity). Functions as an ubiquitin ligase protein in vitro, suggesting that it may regulate the Notch pathway via some ubiquitin ligase activity.,sequence caution:Intron retention.,similarity:Belongs to the Deltex family.,similarity:Contains 1 RING-type zinc finger.,subunit:Homomultimer. May form a heteromultimer with other members of the Deltex family. Interacts with NOTCH1.,
Background	DTX3 functions as an E3 ubiquitin ligase (Takeyama et al., 2003 [PubMed 12670957]).[supplied by OMIM, Nov 2009],
matters needing attention	Avoid repeated freezing and thawing!
