

VD AL 40004

NISCH rabbit pAb

Catalog No	YP-AD-12301

IgG Isotype

Human; Mouse; Rat Reactivity

WB Applications

Gene Name NISCH IRAS KIAA0975

NISCH Protein Name

Immunogen Synthesized peptide derived from human NISCH AA range: 234-284

Specificity This antibody detects endogenous levels of NISCH at Human/Mouse/Rat

Formulation Liquid in PBS containing 50% glycerol, 0.5% BSA and 0.02% sodium azide.

Polyclonal, Rabbit, IgG Source

Purification The antibody was affinity-purified from rabbit serum by affinity-chromatography

using specific immunogen.

Dilution WB 1: 500-2000

Concentration 1 mg/ml

≥90% Purity

Storage Stability -20°C/1 year

Synonyms

Observed Band

Cell Pathway Cell membrane. Cytoplasm. Early endosome. Recycling endosome. Enriched in

the early/sorting and recycling endosomes. Colocalized in early/sorting endosomes with EEA1 and SNX2 and in recycling endosomes with transferring receptor. Detected in the perinuclear region partially associated with punctate structures (By similarity). Colocalizes with PAK1 in cytoplasm, vesicular structures in the perinuclear area and membrane ruffles (By similarity). Colocalizes with RAC1 in the cytoplasm and vesicles structures (By similarity). Colocalized with MAPK1 and MAPK3 in RVLM neurons (By similarity).

Tissue Specificity Isoform 1, isoform 3 and isoform 4 are expressed in brain. Isoform 1 is expressed

in endocrine tissues.

Function domain:Both the presence of the PX domain and the coiled coil region are

necessary for its endosomal targeting.,function: Acts either as the functional imidazoline-1 receptor (I1R) candidate or as a membrane-associated mediator of the I1R signaling. Binds numerous imidazoline ligands that induces initiation of cell-signaling cascades triggering to cell survival, growth and migration. Its activation by the agonist rilmenidine induces an increase in phosphorylation of mitogen-activated protein kinases MAPK1 and MAPK3 in rostral ventrolateral medulla (RVLM) neurons that exhibited rilmenidine-evoked hypotension (By similarity). Blocking its activation with efaroxan abolished rilmenidine-induced

mitogen-activated protein kinase phosphorylation in RVLM neurons (By similarity). Acts as a modulator of Rac-regulated signal transduction pathways (By similarity). Suppresses Rac1-stimulated cell migr

Background

This gene encodes a nonadrenergic imidazoline-1 receptor protein that localizes to the cytosol and anchors to the inner layer of the plasma membrane. The orthologous mouse protein has been shown to influence cytoskeletal organization and cell migration by binding to alpha-5-beta-1 integrin. In humans, this protein has been shown to bind to the adapter insulin receptor substrate 4 (IRS4) to mediate translocation of alpha-5 integrin from the cell membrane to endosomes. Expression of this protein was reduced in human breast cancers while its overexpression reduced tumor growth and metastasis; possibly by limiting the expression of alpha-5 integrin. In human cardiac tissue, this gene was found to affect cell growth and death while in neural tissue it affected neuronal growth and differentiation. Alternative splicing results in multiple transcript variants encoding differerent isoforms. Some isoforms lack the expected C-terminal domains of a functional imidazoline receptor.
