

Syntenin mouse mAb

Catalog No YP-Ab-12625 Isotype IgG Reactivity Human Applications WB Gene Name sdcbp Protein Name Purified recombinant human Syntenin protein fragments expressed in E.coli. Specificity This antibody detects endogenous levels of Syntenin and does not cross-react with related proteins. Formulation Liquid in PBS containing 50% glycerol, 0.5% BSA and 0.02% sodium azide. Source Monoclonal, Mouse Purification The antibody was affinity-purified from mouse ascites by affinity-chromatography using epitope-specific immunogen. Dilution wb 1:1000 Concentration 1 mg/ml Purity ≥90% Storage Stability -20°C/1 year Synonyms MDA-9,MDA9,Melanoma differentiation-associated protein 9;Pro-TGF-alpha cytoplasmic domain-interacting protein 18;Scaffold protein Ppb;;SDCB1_HUMAN:Sdcbp;SDCBP;ST1;SYCL; Syndecan binding protein 1;Syntenin 1;Syntenin 1;Syntenin 1;Syntenin 2;Syntenin 2;Syntenin 3;Zyntecan binding protein 1;Syntenin 2;Syntenin 3;Zyntecan binding protein 1;Cyntenin 3;Zyntenin 3;Zyntecan binding protein 1;Cyntenin 4;Zyntenin 4

Function

function: Seems to function as an adapter protein. In adherens junctions may function to couple syndecans to cytoskeletal proteins or signaling components. Seems to couple transcription factor SOX4 to the IL-5 receptor (IL5RA). May also play a role in vesicular trafficking. Seems to be required for the targeting of TGFA to the cell surface in the early secretory pathway, induction: By gamma interferon in melanoma cells.,PTM:Phosphorylated on tyrosine residues.,similarity:Contains 2 PDZ (DHR) domains., subcellular location: Mainly membrane-associated. Localized to adherens junctions, focal adhesions and endoplasmic reticulum. Colocalized with actin stress fibers. Also found in the nucleus. Identified by mass spectrometry in melanosome fractions from stage I to stage IV.,subunit:Monomer and homodimer (By similarity). Interacts with SDC1, SDC2, SDC3, SDC4, NRXN2, EPHA7, EPHB1, NF2 isoform 1, TG

Background

syndecan binding protein(SDCBP) Homo sapiens The protein encoded by this gene was initially identified as a molecule linking syndecan-mediated signaling to the cytoskeleton. The syntenin protein contains tandemly repeated PDZ domains that bind the cytoplasmic, C-terminal domains of a variety of transmembrane proteins. This protein may also affect cytoskeletal-membrane organization, cell adhesion, protein trafficking, and the activation of transcription factors. The protein is primarily localized to membrane-associated adherens junctions and focal adhesions but is also found at the endoplasmic reticulum and nucleus. Alternative splicing results in multiple transcript variants encoding different isoforms. [provided by RefSeq, Jul 2008],
