

ACTR-IIA Polyclonal Antibody

Catalog No YP-Ab-13135 Isotype IgG Reactivity Human;Mouse;Rat Applications WB;ELISA Gene Name ACVR2A Protein Name Activin receptor type-2A Immunogen The antiserum was produced against synthesized peptide derived from human ACTR-IIA. AA range:10-59 Specificity ACTR-IIA Polyclonal Antibody detects endogenous levels of ACTR-IIA protein. Formulation Liquid in PBS containing 50% glycerol, 0.5% BSA and 0.02% sodium azide. Source Polyclonal, Rabbit, IgG Purification The antibody was affinity-purified from rabbit antiserum by affinity-chromatography using epitope-specific immunogen. Dilution Western Blot: 1/500 - 1/2000. ELISA: 1/40000. Not yet tested in other applications. Concentration 1 mg/ml Purity ≥90% Storage Stability -20°C/1 year Synonyms ACVR2a; ACVR2; Activin receptor type-2A; Activin receptor type IIA; ACTR-IIA; ACTR-IIA; ACTR-IIA Observed Band 48kD Cell Pathway Membrane; Single-pass type I membrane protein. Tissue Specificity Mammary gland, Testis. Function catalytic activity: ATP		
Reactivity Human; Mouse; Rat Applications WB; ELISA Gene Name ACVR2A Protein Name Activin receptor type-2A Immunogen The antiserum was produced against synthesized peptide derived from human ACTR-IIA. AA range:10-59 Specificity ACTR-IIA Polyclonal Antibody detects endogenous levels of ACTR-IIA protein. Formulation Liquid in PBS containing 50% glycerol, 0.5% BSA and 0.02% sodium azide. Dilution Western Blot: 1/500 - 1/2000. ELISA: 1/40000. Not yet tested in other applications. Concentration 1 mg/ml Purity ≥90% Storage Stability -20°C/1 year Synonyms ACVR2; Activin receptor type-2A; Activin receptor type IIA; ACTR-IIA; ACTRIIA Observed Band 48kD Cell Pathway Membrane; Single-pass type I membrane protein. Tissue Specificity Mammary gland, Testis. Function catalytic activity-ATP + [receptor-protein] = ADP + [receptor-protein] phosphate, cofactor: Magnesium or manganese, function:On ligand binding, forms a receptor complex consisting of two type II and two type I transmembrane receptor swhich autophosphorylate, then bind and activate SMAD transcriptional regulators. Receptor for activin A activin B and inhibin A, similarity. Belongs to the protein kinase superfamily. TKL Ser/Thr protein kinase family. TGFB receptor subnarily, similarity. Contains 1 protein kinase activing and citivate swith AIP1. Part of a complex consisting of AIP1, ACVR2A, ACVR1B and SMAD transcriptional regulators. Receptor for activin A activin B and inhibin A, similarity. Belongs to the remembers of the transforming growth factor-beta (TGF-beta) superfamily involved in diverse biological processes. The encoded protein is a transmembrane membrane	Catalog No	YP-Ab-13135

heterodimeric complexes with various combinations of type I and type II receptors and ligands in a cell-specific manner. The encoded type II receptor is primarily involved in ligand-binding and includes an extracellular ligand-binding domain, a transmembrane domain and a cytoplasmic serine-threonine kinase domain. This gene may be associated with susceptibility to preeclampsia, a pregnancy-related disease which can result in maternal and fetal morbidity and mortality. Alternative splicing results in multiple transcript variants of this gene. [provided by RefSeq, Jun 2013],
