## Cdc25B (phospho Ser353) Polyclonal Antibody

| Catalog No         | YP-Ab-16620   |
|--------------------|---|
| Isotype            | lgG   |
| Reactivity         | Human;Monkey  |
| Applications       | WB;IHC;IF;ELISA   |
| Gene Name          | CDC25B  |
| Protein Name       | M-phase inducer phosphatase 2   |
| Immunogen          | The antiserum was produced against synthesized peptide derived from human CDC25B around the phosphorylation site of Ser353. AA range:319-368  |
| Specificity        | Phospho-Cdc25B (S353) Polyclonal Antibody detects endogenous levels of Cdc25B protein only when phosphorylated at S353.   |
| Formulation        | Liquid in PBS containing 50% glycerol, 0.5% BSA and 0.02% sodium azide.   |
| Source             | Polyclonal, Rabbit,IgG  |
| Purification       | The antibody was affinity-purified from rabbit antiserum by affinity-chromatography using epitope-specific immunogen.   |
| Dilution           | WB: 1/500 - 1/2000. IHC: 1/100 - 1/300. ELISA: 1/40000 IF 1:50-200  |
| Concentration      | 1 mg/ml   |
| Purity             | ≥90%  |
| Storage Stability  | -20°C/1 year  |
| Synonyms           | CDC25B; CDC25HU2; M-phase inducer phosphatase 2; Dual specificity phosphatase Cdc25B  |
| Observed Band      | 64kD  |
| Cell Pathway       | Cytoplasm, cytoskeleton, microtubule organizing center, centrosome . Cytoplasm, cytoskeleton, spindle pole .  |
| Tissue Specificity | Brain,Rectum tumor,   |
| Function           | catalytic activity:Protein tyrosine phosphate + H(2)O = protein tyrosine +<br>phosphate.,enzyme regulation:Stimulated by B-type cyclins.,function:Tyrosine<br>protein phosphatase which functions as a dosage-dependent inducer of mitotic<br>progression. Directly dephosphorylates CDC2 and stimulates its kinase activity.<br>The three isoforms seem to have a different level of activity.,PTM:Phosphorylated<br>by BRSK1 in vitro. Phosphorylated by CHEK1, which inhibits the activity of this<br>protein.,similarity:Belongs to the MPI phosphatase family.,similarity:Contains 1<br>rhodanese domain., |
| Background         | cell division cycle 25B(CDC25B) Homo sapiens CDC25B is a member of the CDC25 family of phosphatases. CDC25B activates the cyclin dependent kinase CDC2 by removing two phosphate groups and it is required for entry into mitosis. CDC25B shuttles between the nucleus and the cytoplasm due to nuclear localization and nuclear export signals. The protein is nuclear in the M and G1   |
|                    |   |

phases of the cell cycle and moves to the cytoplasm during S and G2. CDC25B has oncogenic properties, although its role in tumor formation has not been determined. Multiple transcript variants for this gene exist. [provided by RefSeq, Jul 2008],

| matters needing attention | Avoid repeated freezing and thawing!  |
|---------------------------|---|
| Usage suggestions         | This product can be used in immunological reaction related experiments. For more information, please consult technical personnel. |
