Observed Band	
Cell Pathway	Cytoplasm .
Tissue Specificity	Ubiquitously expressed in all tissues with highest expression in testis brain and kidney.
Function	Core component of a Cul9-RING ubiquitin-protein ligase complex, a complex that mediates ubiquitination and subsequent degradation of BIRC5 and is required to maintain microtubule dynamics and genome integrity. Acts downstream of the 3M complex, which inhibits CUL9 activity, leading to prevent ubiquitination of BIRC5 . Cytoplasmic anchor protein in p53/TP53-associated protein complex. Regulates the subcellular localization of p53/TP53 and subsequent function .
Background	
matters needing attention	Avoid repeated freezing and thawing!
